SPRING

SUMMER

FALL

Many of your plants go dormant in the fall, but your New Image team is as busy as ever!

Fall is your landscape's season of transition, when the high-growing summer season gives way to shorter days and cooler temperatures. The change of pace requires special care from New Image. We take the extra steps needed to ensure a beautiful landscape during this slower-growing season and prepare your landscape for the coming winter.

Weed Control

Weed seeds are in the ground, waiting to germinate after the winter rains. By applying pre-emergent herbicide, we stop weeds before they sprout. Treatment must be done now for maximum effectiveness.

Drainage System Maintenance

Our crews inspect v-ditches and drains, and remove debris that could cause a blockage. Drainage systems must be regularly maintained to prevent damaging erosion, or even flooding.

Pruning

As cooler temperatures slow plant growth, it's the perfect time to prune shrubs and trees under twelve feet, to promote healthy growth in the months to come. We prone shrubs by hand to avoid unnecessary plant damage.

Leaf Debris Removal

Changing temperatures prompts trees to drop their leaves. We stay busy clearing leaf debris from lawns, planters and sidewalks.

Fertilization

By augmenting soil nutrients, we keep lawns lush, shrubs, color, and trees healthy as they prepare for spring.

Fall for the best in professional seasonal landscape care - call New Image today.
